DETAILED ACTION

This action is in response to the appeal brief filed 19 December 2008. Claims 1-3 and 19 are currently pending, and claims 4-18 and 20-22 were previously cancelled.

Response to Arguments

Applicant's arguments, see pages 8-18, filed 19 December 2008, with respect to the rejections of claims 1-3 and 19 have been fully considered and are persuasive. The rejection of claims 1-3 and 19 has been withdrawn.

Allowable Subject Matter

Claims 1-3 and 19 are allowed. The following is an examiner's statement of reasons for allowance:

Independent claim 1 is directed to a method for handling personally identifiable information in a data processing system using object classes and rules. A first set of object classes represents active entities representing a human being or legal entity in the information-handling process, wherein a limited number of privacy-related actions specify operations performed on the data. A second set of object classes represents data and rules in the information-handling process, wherein the data is the personally identifiable information, and at least one object class specifies rules associated with the personally identifiable information. Transactions are processed in the information-handling system using the object classes wherein a first active entity is a first data user

Art Unit: 2432

represented by an object of the first object class requests personally identifiable information from a second entity of the first object class, and a third entity of the first object class is a second data user that requests personally identifiable information from the first data user. The rules of the second set of object classes define if and how the personally identifiable information of the first and second data users may be provided.

The most similar prior art is the disclosure of Benantar et al. (US Patent # 5,787,427). However, claim 1 differs from the disclosure of Benantar in that they specify if and how the data may be provided from the first data user to the second data user. Conversely, Benantar merely teaches an access matrix specifying what operations the first data user may perform on the data, and what operations the second data user may perform on the data. Because of this difference between the prior art and the claimed invention, claim 1 is considered to be allowable. Claims 2, 3, and 19, which depend on claim 1, are similarly considered to be allowable due to this dependence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
